

StableRidge Systems - Capability Overview

Executive overview

Stableridge is a hybrid advisory and platform company focused on governance-led digital rights management. The operating model combines risk analysis, control design, runtime enforcement, and evidence traceability.

Architecture summary

Content Authority provides policy-aware sharing, revocation controls, and auditable activity telemetry.

Engineering services align control architecture to operating constraints and delivery governance.

Platform services are designed for tenant isolation, runtime policy checks, and deterministic event capture.

Governance alignment (assurance phrasing)

Control design is informed by MITRE ATT&CK techniques, OWASP Top 10 risk patterns, and IRAP-style expectations.

Positioning is alignment-focused and does not assert blanket compliance guarantees.

Platform modules

1. Content Authority: secure sharing, link controls, watermarking, and revocation governance.
2. Evidence and audit: exportable evidence bundles with traceable activity context.
3. Integrations: API and webhook interfaces with scoped access and control boundaries.
4. Advisory delivery: Discover, Design, Deliver, Assure engagement model.

Deployment posture

SaaS multi-tenant model with AU-region aligned hosting posture and observability controls.

Operational design includes alerts, runbooks, backup planning, and recovery checkpoints.
